

Assignment 2

Installation and configure Google App Engine Program:

```
print("Welcome to The Cloud Computing Lab")
print("Here we are dealing with Google Cloud Engine")

# Console-based application example
def display_menu():
    print("\n===== Cloud Console Application =====")
    print("1. Display Welcome Message")
    print("2. Perform Addition")
    print("3. Display System Information")
    print("4. Exit")

def welcome_message():
    print("\nWelcome! This program demonstrates a simple console application.")
    print("It can be used while learning cloud deployment concepts.")

def perform_addition():
    try:
        num1 = float(input("Enter first number: "))
        num2 = float(input("Enter second number: "))
        result = num1 + num2
        print("Result:", result)
    except ValueError:
        print("Invalid input! Please enter numeric values.")

def system_info():
    import platform
    print("\nSystem Information")
    print("Operating System:", platform.system())
    print("OS Version:", platform.version())
    print("Processor:", platform.processor())

def main():
    while True:
        display_menu()
        choice = input("Enter your choice: ")

        if choice == "1":
            welcome_message()

        elif choice == "2":
            perform_addition()

        elif choice == "3":
            system_info()

        elif choice == "4":
            print("Exiting program...")
            break

        else:
            print("Invalid choice! Please try again.")
```

```
if __name__ == "__main__":
    print("Starting Program1 Console Application...")
    main()
```

Output:

```

CLOUD SHELL
Terminal cloudshell X + v

(i) Gemini CLI is available in Cloud Shell terminal. Type gemini to try it. Learn more

Welcome to Cloud Shell! Type "help" to get started, or type "gemini" to try prompting with Gemini CLI.
To set your Cloud Platform project in this session use 'gcloud config set project [PROJECT_ID]'.
You can view your projects by running 'gcloud projects list'.
